Soma de ponto com vetor

Proposição

- Dados \vec{a}' e P quaisquer, $\exists B$
vetor ponto existe ponto
 tal que $\vec{a}' = \overrightarrow{PB'}$
representante único $\xrightarrow{\text{i.e.}} \overrightarrow{PA} = \overrightarrow{PB'} \Rightarrow A = B$

Definição

$$P + \vec{a}' = Q \Leftrightarrow \overrightarrow{PQ} = \vec{a}'$$

Propriedades

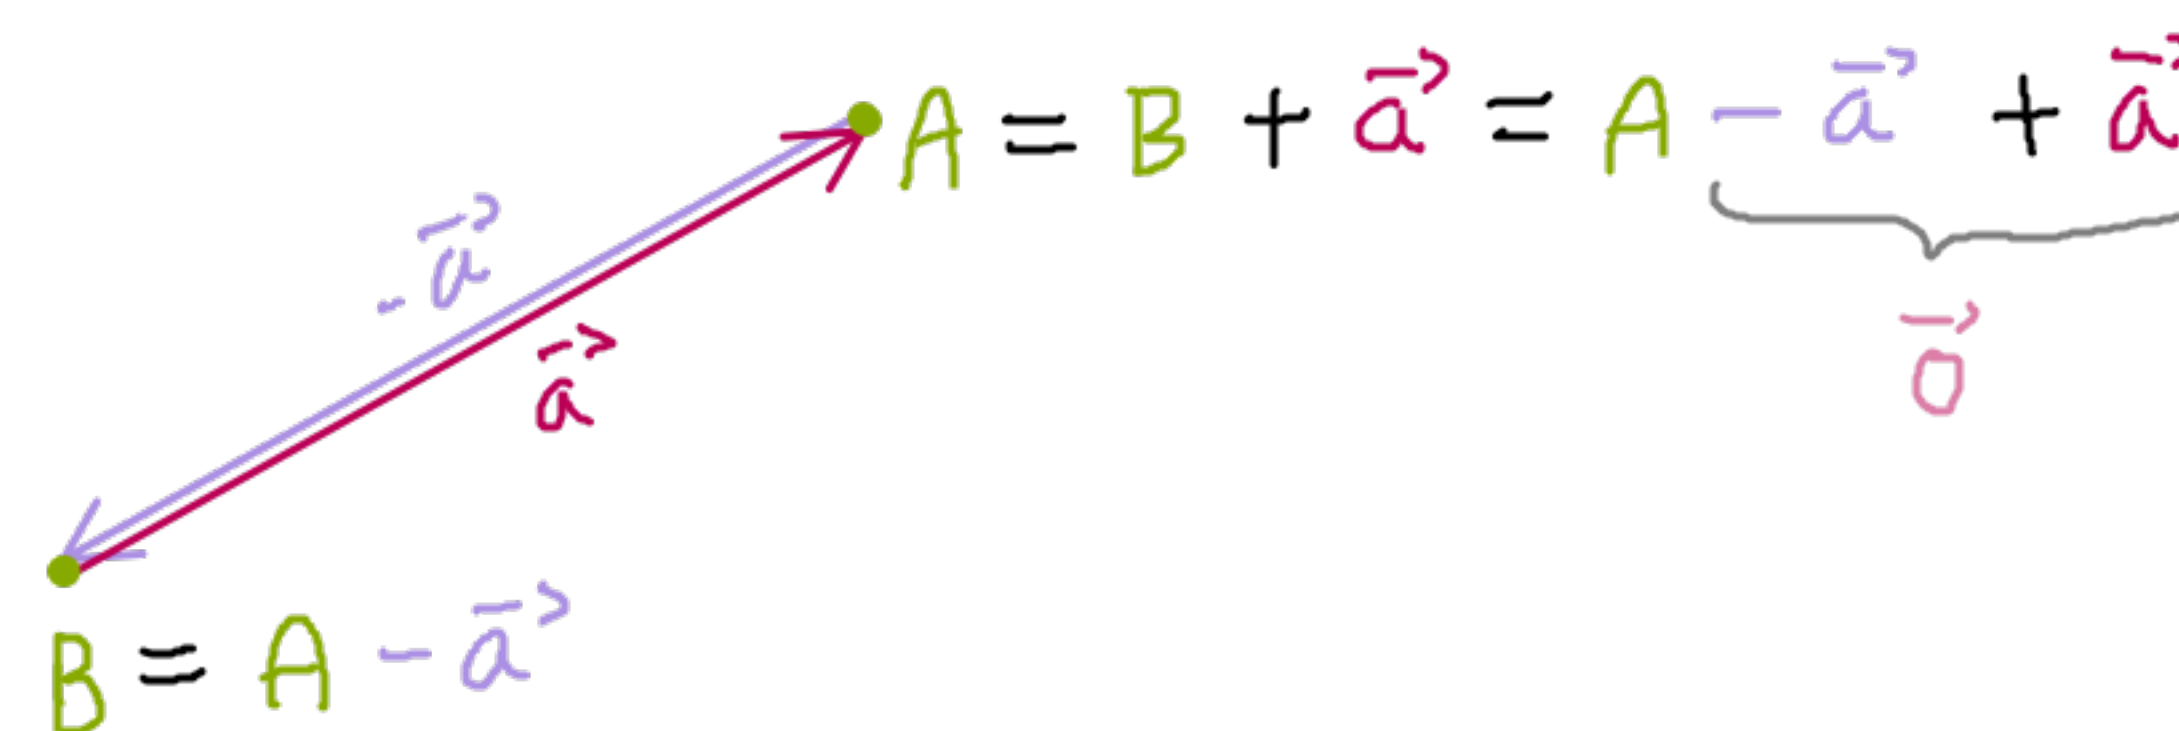

$$(A + \vec{a}') + \vec{b}' = A + (\underbrace{\vec{a}' + \vec{b}'}_{\vec{c}'})$$

$$A + \vec{a}' = A + \vec{b}' \Rightarrow \vec{a}' = \vec{b}' \quad (\text{cancelamento de ponto})$$

$$A + \vec{a}' = B + \vec{a}' \Rightarrow A = B \quad (\text{cancelamento de vetor})$$

$$(A - \vec{a}') + \vec{a}' = A$$
